Han® Hoods and Housings with Metric Cable Entries

The reason for the new product offerings is the publication of the international DIN EN 50262 metric thread specification.

The existing PG series, PG 7 to PG 48 will be, in time, replaced by the metric series M 12 to M 63.

The adoption of metric threads considerably simplifies the understanding and specification of glands as the product type description contains the thread dimension. E.g. M 20 refers to 20 mm thread diameter.

To differentiate the metric threaded hoods and housings from the previous PG versions metric types will be marked with M.

The Cross Reference table shows the correlation between the PG versions and the new metric types.

Please notice that the maximum cable diameter will be reduced by the new metric cable glands.

Below is shown the cable range of metric glands:
